

Cleaning Products Visual Guide for Children

This guide gently explores what cleaning products are, how they're made, and what might be added — like water, surfactants, or occasional fragrance and colour.

With **soft colours**, **friendly visuals**, and clear language, each panel supports **emotional regulation**, **sensory understanding**, and **relational trust**.

If cleaning products feel **unfamiliar** or seem a little **confusing** sometimes, this guide is here to help things feel more **manageable** — one **calm bottle** at a time.

Questions You Might Have

What are cleaning products made of?

Cleaning products often contain water, active cleaning agents, and ingredients to help with smell or texture. These components work together to clean surfaces effectively.

What are surfactants in cleaning products?

Surfactants help lift dirt and grease — they're the active part that does the cleaning. They break down oils and allow water to wash away dirt and grime.

Are there cleaning products safe for sensitive skin?

Yes, many brands offer hypoallergenic, fragrance free, and gentle formulations designed for people with sensitivities. Always check labels for allergy information and safety ratings.

What's Inside Cleaning Products

A sensory-safe guide to understanding ingredients, scents, and safety.

What's In The Bottle?

Cleaning products often contain water, cleaning agents, & other ingredients.

Water (Main Ingredient)

Water helps mix everything together and makes it easier to spread or wash away.

Surfactants (Cleaning Agents)

Surfactants help lift dirt & grease — they're the active part that does the cleaning.

Fragrance & Colour (Optional)

Some products include scents or dyes to change how they look or smell.

Safety & Sensitivities

Labels show if a product may irritate skin or eyes — look for gentle-use options.
