

What's Inside Fixing My Tooth

A sensory-safe guide to how the dentist repairs a tooth with a filling.

Why Teeth Need Fixing

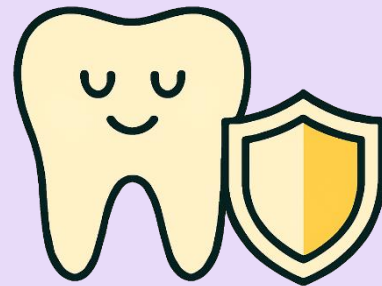

Sometimes a tooth needs fixing if it has a hole or feels sore.

Special Material

The dentist uses a special material called a filling to repair the tooth.

Making Teeth Strong

The filling helps the tooth stay strong and stops the hole from growing bigger.

How It Feels

The dentist helps my tooth feel calm with soft pillow comfort or gentle tools.

Healthy Tooth, Happy Smile

Fixing a tooth helps it last longer and keeps my smile healthy and strong.
